Thuật ngữ trong học phần này (168)

Unstructured	Fill in the missing word. Due to the _____ nature of qualitative research, there is no agreed process in designing a qualitative research project. To this end, researchers can use certain design principles in designing their qualitative projects. A. Unstructured B. Numerical C. Rigid D. Structured
Solution	Fill in the missing word. All researchers commence their research with an issue or _____, investigate the relevant empirical evidence and literature to identify relevant research evidence which will help in designing the qualitative questions, collect data and analyse them. A. Solution B. Data set C. Problem D. Methods

Storytelling	Several aspects of a qualitative research project vary from researcher to researcher. For instance, the empirical evidence and the literature may be reviewed to inform the questions initially raised or it may be reviewed at a late stage during the research process or it may be used to highlight the importance of the research problem. Another consideration regarding qualitative research is the structure and writing of the qualitative project. This varies across different approaches such as _____ and performances including theatre and poems. A. Storytelling B. Problem-solving C. Interviews D. Focus groups
Interviews	Fill in the blank word. The in-depth _____ does not have the restrictions of a group process and in this vein, new streams of _____ and questioning can be developed at any time. A. Advice B. Interviews C. Participants D. Questionnaires
Personal	Fill in the blank word. _____ interviews offer more flexibility and new ways of gathering insights. The close and personal interaction permits the interviewer to be more sensitive and open to nonverbal feedback and body language. With personal interviews, a personal point of view can be gathered without the influence of others. The interview can be conducted in any place and no certain or demanding preparations are needed. A. Group B. Personal C. Quick D. Structured
Skills	Fill in the blank word. The success of an in-depth interview depends on the _____ of the interviewer. A. Skills B. Accent C. Questions D. Charisma
Interpreting	The unstructured nature of the interview necessitates the researcher to have the competence in gathering and _____ the information collected. A. Writing B. Interpreting C. Remembering D. Paraphrasing

Structured	Fill in the blank word. Survey approaches are based upon the design and development of well _____ questionnaires. Key informants may be asked several questions with respect to their intentions, motivations, attitudes, demographic and lifestyle characteristics among others. The questions may be asked verbally in writing or through a remote device (e.g., laptop) and the responses may be collected through these ways. A. Directed B. Arranged C. Standardised D. Structured
Standardisation	Structured refers to the level of _____ that is used during the data collection procedure. A. Standardisation B. Collaboration C. Creativity D. Variation
Pre-arranged	In structured data collection a formal research instrument is developed and the different questions are offered in a _____ order. A. Pre-arranged B. Random
Direct or indirect	The research can be classified as _____ or _____ based upon whether the objective of the research is known to the respondents. A. Structured or unstructured B. Standardised or random C. Fixed or changing D. Direct or indirect
Fixed	In a survey questionnaire, the vast majority of questions are _____ responses that require the respondent to select the answer from a prearranged set of responses. For instance, a question designed to operationalise consumer perceptions regarding a product may be read as follows: The nutrition value of product X is high and the answers are anchored in a 5 point Likert type scale ranging from strongly disagree (1) to strongly agree (5). A. Obscure B. Easy C. Obvious D. Fixed
Stratified	_____ sampling is a probability sample which is distinguished by the following processes: the original population is divided into two or more mutually exclusive and exhaustive subsets (e.g., males and females) and simple random samples of elements from two or more subsets are selected independently of each other. A. Systematic B. Cluster C. Single Random D. Stratified
Stratum	Each element of the population should be allocated to one and only one _____ stratum and no population elements should be omitted. A. Item B. Group C. Element D. Stratum

Stratified	_____ sampling is a probability sample which is distinguished by the following processes: the original population is divided into two or more mutually exclusive and exhaustive subsets (e.g., males and females) and simple random samples of elements from two or more subsets are selected independently of each other. A. Systematic B. Cluster C. Single Random D. Stratified
Strata	Stratified sampling is a two-step approach where the population is divided into subpopulations or _____. A. Groups B. Division C. Strata D. Elements
Cluster	In _____ sampling the target population is initially divided to mutually exclusive and collectively exhaustive subpopulations. A. Stratified B. Cluster C. Systematic D. Single Random
Incentives	Response rates can be increased through the adoption of _____ to research participants. A. Questionnaires B. Incentives C. Promises D. Suggestions
Refusals	A well-developed research instrument can enhance the response rate and reduce _____ to participate in the research study. If the research instrument and the whole experience in completing the questionnaire is pleasant for the research participants, the response rate can improve. A. Refusals B. Willingness C. Follow ups D. Suggestions
Conversion	Well-trained researchers can enhance response rates and increase _____ and persuasion of key informants. Follow up or contacting the non-respondents periodically, works well in eliminating refusals and convince individuals to participate in the research project. A reminder may be sent to non respondents to complete the questionnaire. A. Refusals B. Conversion C. Follow ups D. Suggestions

Data mining	_____ is defined as the process of identifying constructive associations, patterns and trends emerging from accumulated amounts of collected data stored in repositories, through the adoption of pattern recognition and statistical and mathematical approaches. A. Data mining B. Data reading C. Data analysis D. Data cleaning
Syndicated sources	_____ refer to organisations which gather and sell pools of data and information which are developed to address information requirements and needs. A. Data B. Texts C. Syndicated sources D. Analyses
Diary media panels	_____ focus on electronic devices which automatically record behaviour and are supplemented by a diary. Such data are used for creating media programmes on air time and developing viewer profiles. A. Diary media panels B. Focus groups C. Interviews D. Discussions
Satisfaction	Market research assists companies in moving in the right manner, and in this vein, companies can use the collected information in order to improve strategic decision making and to improve customer _____. A. Metrics B. Satisfaction C. Appearance D. Focus
Internal	Gathered market research data should be integrated with other research data coming from both _____ and external sources to make the most of their use and to make more confident strategic decision making. A. Internal B. External C. Mixed D. Experimental
Automated	The budget scheduled for research should be considered and in this vein, if there are limited research resources more cost efficient ways of collecting data to be considered including _____ data collection approaches. Right market research data assist companies in better connecting with their customers and attract new customers. A. Internal B. External C. Automated D. Manual

Scaling	_____ is defined as the procedure of placing key informants to a continuum regarding their attitude towards a certain product or product line. A. Measuring B. Assessing C. Scaling D. Reconfiguring
Nominal	A _____ scale is a figurative labelling scheme in which numbers serve as labels or tags in order to identify and classify objects. A. Nominal B. Ordinal C. Ratio D. Interval
Interval	_____ scale is a scale where the numbers used to rank objects such as numerically equal distances on the scale demonstrate equal distances in the attribute being measured. A. Interval B. Nominal C. Ordinal D. Ratio
Paired comparison	_____ scaling focuses on two objects which the respondents are asked to select one according to some criterion. A. Paired comparison B. Nominal C. Ordinal D. Likert
Semantic differential	The development of a _____ scale commences with a concept which should be rated, such as the image of a brand or the quality of a service. The market researcher chooses opposite pairs of words or phrases (for instance, reliable (1) to unreliable (7)) which could be used to capture the concept. As a next step, respondents rate the concept on a scale which is usually anchored from 1 to 7. A. Ordinal B. Semantic differential C. Likert D. Nominal
Stapel	In _____ scale a single adjective (e.g., user friendly, high quality) is located in the centre of the scale which usually is a 10 point scale that ranges from +5 to -5. The approach is designed to operationalise the direction and the intensity of the attitudes at the same time. A. Likert B. Stapel C. Ordinal D. Nominal
Likert	The _____ scale consists of a number of statements that communicate a favourable or unfavourable attitude toward the concept that is under investigation. A. Ordinal B. Likert C. Semantic differential D. Stapel

Single instrumental	Under the spectrum of a _____ case study, the researcher concentrates on an issue or concern and as a next step chooses a bounded case study to depict the case. A. Longitudinal B. Attitudinal C. Single instrumental D. Random
Multiple	In a collective case study or _____ case study the issue to be investigated is selected but the researcher chooses a number of case studies to depict the issue. Such an action helps to investigate different aspects of the issue under investigation. A. Attitudinal B. Random C. Experimental D. Multiple
Representative	Qualitative researchers are reluctant to generalise the cases from one context to another because the contexts of the various cases are different. If the intention is to generalise, the qualitative researcher should select _____ cases to be considered in the qualitative study. A. Representative B. Internal C. Mixed D. External
Experience	Phenomenologists identify a phenomenon which serves as an object or the unit of analysis and is related to an individual _____. A. Experience B. Feelings C. Observation D. Stories
Textural	The combination of both the _____ and structural descriptions offer the whole essence of the experience with the phenomenon. A. Textural B. Natural C. Empirical D. Thematic
Action research	The _____ process is based upon the stages of the action research cycle which consists of a number of different stages. A. Action research B. Case study C. Focus groups D. Interviews E. Experiments
Engaging	In action research, it is essential to construct the initiative with pertinent stakeholders and to produce and gather research data regarding an ongoing system that is relevant to an objective or a need or requirement; _____ with others in order to review the data which was collected. A. Engaging B. Speaking C. Checking D. Replacing

Critical	Two popular types of ethnography include realist ethnography and _____ ethnography. A. External B. Similar C. Internal D. Critical
Realist	_____ethnography represents an objective picture of a situation such as customer reactions towards a branded product, with the objective of reporting the information learned by research participants in the research field. Under this type of ethnography, the ethnographer narrates the study in third-person and objectively reports what has been discovered by the research participants. The researcher reports the collected information without any personal bias. The ethnographer generates the research participants point of view by using carefully edited quotations and should objectively communicate and interpret the group culture that is being analysed. A. Positivist B. External C. Realist D. Internal
Inequality	Critical ethnography is researchers who are politically minded people who aim to use their research to speak against _____. Critical ethnographers may research brands and their relationships with customers. Ethnographic research can offer an accurate understanding of consumer behaviour which helps with the modelling of branding as it is socially perceived by consumers. A. Criticality B. Inequality C. Similarity D. Assessment
D	Which of the following statements about research are valid? A. Research has to be purely speculative, disconnected from practical concerns that would only be distractions. B. Research is only inspired by practical problems observed in the physical world. C. Research is only a hobby of talented individuals, who can afford investing their time and effort in it. D. Research may generate new knowledge. New knowledge may generate innovations that may favor progress of society. E. Research does not require other investments than salaries for researchers.
D E	Which of the following statements about societal investments in research are valid? A. Research is a luxury. Investments are only justified in periods of economic growth. B. Society invests in research as a way to reduce unemployment. C. Research is a burden for taxpayers. Investments in research should only be made if achievement of practically useful results is guaranteed upfront. D. Investments are made because research can lead to useful innovations and progress of society. E. Society invests in research because it may generate new knowledge and knowledge is a human aspiration.

A B D (Not Correct)	This question is about originality. When can a research result be defined original? A. The research result was not known before. B. The process through which the research lead to the result is novel. C. The research result can lead to a useful product. D. The research result was unexpected. E. The research result was very hard to achieve.
B E	This question is about significance. When can a research result be defined significant? A. The research result was unexpected. B. The research result may be used by other researchers to advance their research. C. The research result was not known before. D. The research that produced the result required a very substantial funding. E. The research result may lead to an improvement of a certain practical process, which reduces its cost and improves its performance.
A B	This question is about rigor. When can a research result be defined rigorous? A. The research result is properly formalized in mathematical form, and definitions and proofs are described clearly, correctly, and elegantly. B. The research result is a new artifact, whose design and validation are clearly and thoroughly described. C. The research result may be used by other researchers to advance their own research. D. The research result solves an open problem that has been studied for many years. E. The research result is of theoretical nature.
B	Which of the following statements about the distinction between basic and applied research are acceptable? A. Basic research only requires "paper and pencil". No special equipment is needed. B. The spectrum between basic and applied research is continuous and a researcher may engage in both kinds of research during his/her work. C. Basic research inevitably leads to discoveries that can then be transformed by applied research into practical industrial innovations. D. Basic research is so fundamentally different from applied research that a researcher has to specialize and choose between the two upfront. E. Applied research is a less valuable (and prestigious) kind of research than basic research.
B C	Which of the following statements about funded research programs are appropriate? A. A top-down research program only funds research that aims at an empirical evaluation in a practical setting of previously achieved theoretical results. B. A bottom-up research program allows researchers to select any possible research topic, and proposals are selected for funding only based on their originality, significance, and rigor. C. A top-down research program defines precisely the research topics that can be funded and should be addressed by applicants. D. A bottom-up research program only supports research that is motivated by current, practical needs of industry. E. A top-down research program gives researcher maximum freedom in selecting research topics.

C	Tick one or more of the following statements, which properly describes the scientific method, originated in the 17th century by scientists like Galileo, Newton, and others. A. The method assures that a certain theory explaining a natural phenomenon is valid (i.e., it is an undisputable truth) after carefully chosen experiments confirm it. B. The method is purely theoretical, and does not require any experiments. C. The method consists of observing a natural phenomenon under study, postulating a theory that explains it, and devising carefully chosen experiments to confirm or disprove the theory. D. The method is based on validation of a theory by randomly generated experiments. E. The method requires explaining the natural phenomenon under study avoiding the use of mathematics
E	What is a null hypothesis? Tick the correct answer. A. Hypothesis that further experiments disprove. B. An obviously wrong hypothesis that does not explain a certain phenomenon. C. No hypothesis made. D. Hypothesis made by inexperienced scientist. E. Hypothesis framed in a negative form, which researchers try to reject to confirm a theory.
B (Not Correct)	A scientific theory... (tick one) A. Is guaranteed to be unfalsifiable when it is published. B. Is valid until further findings disprove it. C. Is valid if a majority vote of researchers approves it. D. Must be stated as an absolute truth. It is guaranteed that it will never be falsified by further experiments. E. Must always be described as a set of mathematical formulae.
A B D	Deduction vs. induction. Tick the correct statements: A. Deductive inferences can be used to generate predictions from a given theory. B. Modus ponens is a typical deductive inference rule. C. In deductive inference, the consequences of true premises must be further validated by experiments before they can be accepted as a truth. D. In deductive inference, the consequences are guaranteed to be true if premises are true. E. Inductive inferences always lead to necessary conclusions.

A B (Not Correct)	Consider the following statements: All beans in the bag are white These beans are from the bag These beans are white Which of the following statements about inferences are correct? A. The inference rule $b \wedge c \vdash a$ is an induction and leads to a non-necessary conclusion. B. The inference rule $a \wedge b \vdash c$ is a deduction and leads to a necessary conclusion. C. The inference rule $b \wedge c \vdash a$ is a deduction and leads to a necessary conclusion. D. The inference rule $a \wedge c \vdash b$ is an deduction and leads to a necessary conclusion. E. The inference rule $a \wedge c \vdash b$ is an induction and leads to a non-necessary conclusion.
B D E (Not Correct)	Soundness vs. completeness of a theory of a certain phenomenon. Tick the correct statements. A. A theory for a given phenomenon is complete if all its predictions are possible manifestations of the phenomenon. B. A theory for a given phenomenon is complete if it predicts all the possible manifestations. C. A complete theory for a given phenomenon can predict impossible manifestations. D. Ideally, a theory should be both sound and complete. E. A theory for a given phenomenon is sound if all its predictions are possible manifestations of the phenomenon.
B C D E	Consider the following statements about precision and recall of an algorithm. Which are correct? A. Either precision or recall must be equal to one for an approximate algorithm to be acceptable. B. Precision is less than one for algorithms that compute false positives. C. If we are given two approximate algorithms for the same problem, they can they differ in precision and recall. D. Recall is less than one for algorithms that produce false negatives. E. Precision and recall are equal to one for algorithms computing exact solutions.
D E	Consider the following statements about case studies in research. Tick the pertinent answers. A. A case study is never applied in research. It is only used as a didactic aid. B. A case study is a study of a legal action. C. A case study never requires threat analysis. D. Threat analysis should be applied to assess internal and external validity of the conclusions drawn from a case study. E. A case study may concern the use of a proposed new artifact or method in a given context to validate its usability in a practical setting.

B D	Consider an algorithm that is supposed to find all possible occurrences in a text of person's names. We are aware of the difficulty of the problem, and we expect the algorithm to provide an approximate solution. In some cases, understanding whether a word represents a person's name may in fact require deep semantic understanding of the text. Being an approximation, the algorithm may provide false positives and false negatives. Which of the following statements are correct? A. The algorithm finds a name that is not a person's name. This is a false negative. B. The algorithm finds a name that is not a person's name. This is a false positive. C. The algorithm may both find a name that is not a person's name and may fail to find the occurrence of certain person's names. In this case the algorithm is simply an unacceptable approximation. D. The algorithm may find a name that is not a person's name and may fail to find the occurrence of certain person's names. In this case the algorithm can generate both false positives and false negatives. E. The algorithm does not find the occurrence of certain person's names. This is a false positive.
A	You are asked to review a survey paper. In which of the following dimensions you are not expecting the paper to be particularly strong? Tick one. A. Originality B. Significance C. Rigor
A	You are asked to review a theoretical research paper. In which of the following quality dimensions you expect the paper to be particularly strong? Tick one. A. Rigor B. Significance C. Originality
C D	The following statements are about journal and conference publication. Tick the ones that are valid: A. Journals are always more selective and prestigious venues than conferences. B. The publication process for conferences normally takes longer than for journals, and duration can be unpredictable. C. The publication process for journals normally takes longer than for conferences, and duration can be unpredictable. D. In certain scientific areas conferences and journals are equally selective and respected publication venues. E. Conference publication has no scientific value. It is only done as a social activity. This is true for all scientific areas.
A C	The publication process relies on peer review. Which of the following statements are valid? Tick them. A. Peer review is a voluntary service activity done to support the research community. B. To reach better insights into a submitted paper, it is advisable that peer review is delegated to close colleagues of the authors, especially those who have been previous collaborators. C. The goal of peer review is to ensure that published results meet certain quality standards. D. The main goal of peer review is to ensure proper balance among different nationalities of contributors of accepted papers. E. To avoid bias, peer reviewers should not be experts in the field of the contribution.

A B	Which of the following are valid statements about peer review? Tick them. A. In a "double blind" review process not only the identity of the reviewers is undisclosed to the authors, but also the identity of the authors is hidden to the reviewers, to reduce bias. B. The typical situation is that the identity of reviewers is unknown to the author of a submitted paper. C. A "double blind" review process allows authors to submit two related papers to the same venue and have them reviewed by the same set of anonymous reviewers. D. The typical situation is that the author of a paper knows the identity of peer reviewers and interacts with them throughout the review process, if necessary. E. A "double blind" review process requires exactly two anonymous reviewers for each submitted paper.
A B C	Which of the following are valid statements about publications? Tick them. A. Every published book is uniquely identified by its ISBN. B. Most professional societies publish journals and conference proceedings in their respective technical areas. C. A DOI allows unique access to digital objects, including papers and datasets. D. Publication has a legal purpose: it ensures 100% correctness of the reported results. E. The only possible form of publication is in printed form.
A B C	Which of the following statements about research artifacts are valid? Tick them. A. Research artifacts can be an essential complement to papers as a form of research diffusion. B. Making artifacts publicly available requires additional effort by researchers. As a benefit, their research may become more visible and their research impactful. C. Repeatability and replicability of research is supported by sharing artifacts. D. Peer review only applies to papers. Artifacts cannot be peer reviewed. E. Research artifacts, such as datasets, software tools, or simulations, only serve an ancillary purpose in the preparation of a paper and should be kept private. They have no use for others.
B	Which of the following statements about Open Access are valid? Tick them. A. Open Access means that a research product is accessible on-line in digital form, only subject to a minimal access fee. B. Open Access means that a research product is accessible on-line in digital form, free of charge, and free of "most" copyright and licensing restrictions. C. In an Open Access scheme, authors can publish papers without undergoing any form of peer review. D. The notion of Open Access only applies to research papers and not to artifacts. E. No implementation of Open Access can charge a fee to a researcher to publish her product.

A E (Not Correct)	Gold vs Green Open Access: which statements are correct? Tick them. A. Gold Open Access is a special label indicating the most downloaded papers from an online archive. B. A Green Open Access journal allows the author to publish a paper and share it with a selected set of people who must register to get access to it. C. A Green Open Access journal allows the author to publish a paper and then charge for accessing the related artifacts. D. Gold Open Access means that the author publishes his or her work on an Open Access journal, which makes the work immediately, publicly, and freely available to others. E. A Green Open Access journal allows the author to publish a paper and then self-archive a copy in a freely accessible institutional or specialist online archive (e.g., arXiv), or on the personal website.
A C D (Not Correct)	How can we judge whether one is fit for research? Tick the pertinent answers. A. Interest in independent work. B. Interest in a job that will make one rich. C. Ability to think out of the box. D. Persistence in achieving results.
A D E	Consider the following factors one may consider when choosing to enter a PhD program. Tick the three most important. A. Lively and competitive research environment. B. No checks on progress made by the department. C. Short distance from home. D. Presence of strong researchers in the areas in which you would like to work. E. Funding available for salary and travel.
C D E	This is a list of possible goals of a PhD student. Tick the three most important. A. Publish as many papers as possible. B. Work in complete isolation, to just focus on your own research. C. Find opportunities to get some teaching experience and/or student supervision. D. Make the software tool you develop as part of your research a visible and impactful artifact, downloaded by a large number of other researchers E. Publish in top venues.
C E	These are statements about networking as a PhD student. Tick the two most pertinent. A. You should only network for social events with the other PhD students inside your department. B. Networking is only a distraction from your main activity, which is doing research. C. By networking, you may become known to other, more experienced researchers who may help you in the future (e.g., write reference letters for you). D. Networking is only important when required by the funding agency supporting the research, as in the case of multi-site research programs. E. Networking allows you to establish possible research collaborations.
B C E	These are statements about research funding. Tick the three most pertinent. A. Research funding is only needed to support acquisition of expensive research equipment. B. Success in competitive research funding programs is an important achievement, which counts in a researcher's evaluation for hiring or promotion. C. Successful competition in research funding programs can be vital for a researcher's progress because in most cases their appointment does not include a research funding budget. D. Research is a purely intellectual activity. Funding may be needed only to cover a researcher's salary, if no other institution covers it. E. Research funding is highly competitive.

A C E	These are possible achievements of a junior researcher who is applying for a tenure-track position in a research-oriented academic environment. Tick the three most relevant for hiring. A. Advisor of Master students in research projects. B. Very prolific author of papers published in average-quality venues with high acceptance rate. C. Author of a very impactful paper, which describes a solution to an important open problem. D. Presenter of papers in average-quality conferences. E. Successful applicant in a very selective research funding program.
A B C D	A junior researcher, after the PhD and a short period as a post-doc, applies for junior tenure-track position in an academic institution. Reference letters are asked to external experts. Tick the items in the following list which are expected to be in a reference letter. A. Comparison of scientific achievements of the candidate with top individuals in the same field with similar seniority. B. In the case where the expert is an editor of a journal and the candidate acted as a peer reviewer, comments on how accurate and helpful the reviews were. C. Comments on the applicant's presentation skills based on personal experience (e.g., having heard the candidate present in a conference or in a seminar). D. A justified opinion about the candidate's potential to become a research leader in his/her area. E. Comments on the applicant's personal life (e.g., family, hobbies, ...).
C E	Consider the case where a researcher applies for promotion from a non-permanent to a permanent academic position. The following statements refer to reference letters asked to external experts to support the promotion case. Tick the pertinent statements. A. Reference letters should only be asked to scientists who have worked directly with the candidate in the past. B. Reference letters should never comment on the candidate's performance as a peer reviewer. C. The applicant can suggest names of potential external reviewers and should select well known and respected scientists who are familiar with his work and who are likely to express a positive opinion. D. The applicant can suggest names of potential external reviewers and should select among scientists from other institutions who are not familiar with his work. E. Reference letter should contain an assessment of the candidate's proven skills as a supervisor and mentor of younger researchers.
C E	Which of the following statements on paper citations are valid? Tick them. A. The number of citations received by a paper precisely measures impact of the research presented in a paper. If two papers have different numbers of citations, the one with a higher number has more scientific impact than the other. B. The previous statement is true if we exclude self-citations C. The sole number of citations received by a paper does not offer any ground for judgement about its quality. D. The previous statement is true if we also assume that the two papers have been published in the same venue and in the same year. E. A paper which did not receive citations, or only received a few, ten years after publication is likely to have very low significance. This, however, has to be confirmed by further scrutiny.

D	Which of the following statements on Impact Factor (IF) are valid? Tick them. A. IF cannot be applied to conferences. B. IF for a journal is a constant value. It does not change over time. C. IF is an objective and undisputable measure of the scientific reputation of a journal and should replace any subjective judgement of experts. If two journals have even slightly different IF values, a researcher should always try to publish in the one with higher IF. D. IF is an aggregate bibliometric indicator which is ultimately based the citations of papers published in a journal or conference. E. If two papers are published by journals with different IF, the paper published in the journal with higher IF has a higher quality.
A E	Which of the following statements on H-index are valid? Tick them. A. H-index for a researcher X is defined as the maximum value of h such that X has published h papers that have each been cited at least h times. B. H-index for a researcher X is defined as the average value h of citations received by all published papers by the researcher in the past ten years. C. H-index is an objective and undisputable measure of the scientific quality of researchers and should replace any subjective judgement of experts, especially when they are involved in hiring or promotion processes. If two candidates have different H-index values, the one with higher H-index should always be ranked higher. D. H-index for a researcher X is defined as the median value h of citations received by all published papers by the researcher in the past ten years. E. H-index is a bibliometric indicator that applies to researchers.
A	Which of the following statements on quantitative evaluation via bibliometrics are valid? Tick them. A. Bibliometric indicators can be used to inform evaluation, but should never be a substitute for personal, detailed, and rigorous judgement by experts. B. A strength of bibliometrics is that all sources of bibliometric data (such as Google Scholar, ISI Web of Science, and Scopus) provide identical values for the same item (e.g., H-index). C. Bibliometric data are especially valuable for cross-sector comparisons. For example, to decide about allocation of funding among very different sectors (such as Mechanical Engineering or Biology) a reasonable choice might be to assess the average quality of researchers in the different sectors (e.g., averaging H-indexes) and allocate funding accordingly. D. Bibliometric indicators have no bias: they are objective, undisputable, and cannot be tweaked. E. Ultimately, bibliometric indicators are automatically computed numbers and may be used for automatic ranking. Despite minor pitfalls, they are always preferable to human judgement.
A C E	Which of the following statements on ethics are correct? Tick them. A. Ethics is the philosophical study of wrong and right conduct, according to an ideal model. B. Ethics is the philosophical study of beauty and taste. C. A misconduct is a deviation from ethical principles. D. Ethical principles do not apply to scientific research. E. Misconducts can differ in severity.

A E (Not Correct)	Which of the following statements on research misconduct are correct? Tick them. A. Reporting results of a made-up experiment that has never been done is a case of fabrication misconduct. B. A falsification misconduct may consist of designing experiments that try to falsify a theory. C. Fabrication is a research misconduct that refers to artifacts. It means that an artifact has defects and cannot be reused by other researchers. D. A submitted paper that reports fabricated data must be rejected. E. Manually tweaking some experimental results to make experiments look better is a case of falsification misconduct.
E (Not Correct)	Which of the following statements on plagiarism are correct? Tick them. A. Including figures from other papers can be done without giving credit. Copying figures is not a case of plagiarism. B. Including in a paper fragments of text from a paper by other authors, without giving credit, is an example of plagiarism. C. Plagiarism consists of not explicitly citing a highly related previously published paper. D. Whatever is found on electronic archives through Web browsing can be freely included in own papers without incurring in plagiarism. E. An author is allowed to copy text portions from a previous own paper into a new paper and is not required to cite the original paper. Because these texts are from the same author, this is not a case of plagiarism.
B C D (Not Correct)	Which of the following behaviors are clearly unethical? Tick them. A. One of your students helped you in implementing a simulation, whose results will appear in the experimental section of your paper. He is not listed as a co-author, but you decide to explicitly mention her in an acknowledgements section. B. A visiting researcher in your department gives a seminar on her on-going work and mentions a conjecture. She believes that a mathematical proof exists for it, but has not properly demonstrated it. You come out with a proof and submit a paper without citing her idea. C. One of your junior colleagues will soon be evaluated for promotion to a tenured position, and needs to strengthen his CV with more publications. To help him, you tell your PhD student who has done very good work to write a paper which includes also your colleague as a co-author, although he has not contributed. D. You review a paper in an area in which you are active and have already published. The paper under review has no specific relation with your earlier contributions; it just happens to be in the same general area. You strongly object to publication and ask for a major revision, requiring that the authors extensively cite your previous contributions in a "related work" section. E. To maximize probability of acceptance, you submit the same paper in parallel to two conferences.
B	A researcher is a member of a program committee which decides acceptance of papers submitted to a conference and one of her PhD student submits a paper. Can the researcher be one of the reviewers of the paper? A. Yes B. No
B	A researcher is a member of a program committee which decides acceptance of papers submitted to a conference and one of her PhD student submits a paper. Can the researcher be present in the discussion about acceptance of the paper? A. Yes B. No

B	A researcher is acting department chair. She is a member of a national committee which decides about funding. A member of her department submits a proposal. Can she participate in discussions that involve the proposal? A. Yes B. No
B	A researcher 's promotion case is discussed in a department. Her partner in life is a senior member of the department. The two are not officially married. Should the senior member participate in the discussions and vote? A. Yes B. No
B	Your department decides to recognize the best PhD thesis of the year with a special award. All members of the department vote their preferences. Should one be allowed to vote for the thesis of own students? A. Yes B. No
B	You are asked to review a paper submitted for publication in a journal. Can you freely copy and circulate it to your students who are working on a project on the same topic? A. Yes B. No
B (Not Correct)	You submit a paper to conference which adopts a double-blind review process. Is your identity confidential information that the conference organizers cannot disclose to reviewers? A. Yes B. No
B	You are a member of the program committee of a conference and participate in the discussions about acceptance of submitted papers. Later you chat with an author of an accepted paper. Can you disclose the names of the reviewers of the papers? A. Yes B. No
B	You are a member of the program committee of a conference and participate in the discussions about acceptance of submitted papers. Later you chat with an author of a rejected paper. Can you disclose the names of the reviewers of the papers? A. Yes B. No
B	You are a member of a panel in charge of selecting research projects for funding. A researcher who did not succeed in the competition contacts you, asking for advice on how to write a better proposal in the future. Can you pass a copy of a successful application for reference as a good example? A. Yes B. No
A	You are asked to review a paper submitted for publication in a journal. The paper is an identical copy of a paper you previously reviewed for another journal. The paper was rejected for several serious concerns raised by the reviewers. Can your review, which recommends rejection, mention that the paper has been resubmitted with no change, completely ignoring the careful reviews received previously? A. Yes B. No

B	You are asked to review a paper. Suppose you become aware of the identity of the other reviewers. Before you form your own opinion and write your review, you would like to contact the other reviewers asking their opinion about the paper, so that your review report can be in line with theirs. Is this an acceptable practice? A. Yes B. No
A	You always say no to requests to review papers from journals with very low reputation and in all cases of predatory publishing. Is this an acceptable practice? A. Yes B. No
A (Not Correct)	You are a successful researcher, coordinating a group with several PhD students and post-docs, and coordinating three funded research projects. You submit for publication several papers a year. To maximize your research productivity, you decide that for a few years you will not accept to review any papers. Is this an acceptable practice? A. Yes B. No
B	You have just completed your PhD and you receive a kind invitation from journal you never heard of before to become a member of their international editorial board. This is the first invitation you receive. Without any hesitation, you accept the invitation. Is this an acceptable practice? A. Yes B. No
B	Human subjects can only be the subjects of research in life sciences and social sciences. A. Yes B. No
B	Humans participating as subjects in research must be paid. A. Yes B. No
B	In your research you use your students as subjects for a research experiment. Participation in the experiment is a mandatory requirement for students to pass the exam. There is nothing wrong in what you do. A. Yes B. No
B	Children can never be participating subjects in a research. A. Yes B. No
A	Informed and uncoerced consent are required preconditions for participation of human subjects in research. A. Yes B. No
B	Once human subjects sign an informed consent form, the data they provide as research subjects can be freely used and disclosed by researchers, without any restriction. A. Yes B. No
A	The data collected from human subjects must be anonymized prior to disclosure. A. Yes B. No

B	Once human subjects sign an informed consent form, no special procedures must be put in place to researchers to protect the data they provide as research subjects. A. Yes B. No
B	Once human subjects sign an informed consent form, all personal data collected by researchers about participating human subjects can be transferred without any additional constraint only to other researchers. Any other kind of disclosure is not permitted. A. Yes B. No
B	To prevent identification of a participating human subject, you decide to anonymize the collected data by not disclosing the name, address and phone number. Does this always solve the problem? A. Yes B. No
B	My research focuses on development of new technology. Shouldn't it be intrinsically insensitive to ethical concerns? A. Yes B. No
A	My research focuses on game design, more specifically on usability of a new interactive device. May this raise ethical concerns? A. Yes B. No
A	My research focuses on the use of humanoid robots as a possible aid to support interaction with autistic children. May this raise ethical concerns? A. Yes B. No
B	My research focuses on generating optimal machine code for a new special-purpose hardware. May this raise ethical concerns? A. Yes B. No
A	My research focuses on sentiment analysis. I try to identify and extract subjective information by monitoring online conversations in social media and help business to understand the social sentiment. May this raise ethical concerns? A. Yes B. No
A	What is a good way to make your academic essays longer? A. Use some different types of paragraphs to add more body paragraphs. B. Use bigger font so the paper looks longer than it is. C. Repeat my major points several times in the essay.
A	Argument essays should have at least how many reasons to support the argument? A. 3 B. 0 C. 1 D. 2

B	Which sentence below has a correctly formatted quotation (using MLA format)? A. He explains that they "edit and re-edit digital messages as much as they like until they decide they've perfectly conveyed their thoughts (Ghuman).\" B. He explains that they "edit and re-edit digital messages as much as they like until they decide they've perfectly conveyed their thoughts" (Ghuman). C. He explains that they "edit and re-edit digital messages as much as they like until they decide they've perfectly conveyed their thoughts." (Ghuman). D. He explains that they "edit and re-edit digital messages as much as they like until they decide they've perfectly conveyed their thoughts." (Ghuman)
B	Which of the following are types of paragraphs (modes of discourse) that you can use to help develop an argument essay? A. illustration, argument, cause/effect, discussion B. description, argument, compare/contrast, narrative C. discussion, illustration, narrative, classification D. argument, discussion, development, illustration
C	What type of body paragraph is this? A. description B. illustration C. narration D. process
A C	Which of the following are features of an advanced argument essay? Check all that apply. A. It uses outside sources to support the argument. B. It uses personal stories to develop the argument. C. It uses a variety of paragraph types to develop the argument. D. It uses short body paragraphs to support the argument.
A C	What do you have to remember to do when you use an outside source in your academic essays? Check all that apply. A. Cite the source. B. Make the borrowed words seem like your own words. C. Use correct formatting, such as MLA. D. Use quotations to start the body paragraphs.

A

Read the original source on the left and the student's writing on the right and decide if the student plagiarized or not.

Original Source

This can be seen around the world. **The World Health Organization and many nations have issued dietary guidelines to address a global epidemic** of noncommunicable diseases that is far from limited to high-income countries. Global diets have converged such that the same principles for dietary change apply to some extent in all countries. The increase in noncommunicable diseases in low- and middle-income countries is more rapid, and has worse consequences than in high-income countries, according to the Council on Foreign Relations. Moreover, the challenge of combating noncommunicable diseases along with under-nutrition is substantially greater in these countries.

Kumanyika, Shiriki. "Aligning Policies on Nutrition, Food, Environment for Sustainable Future." *The Nation's Health* Mar. 2015: 3. *Academic OneFile*. Web. 2 July 2015.

Student's Writing

Many health agencies around the world are busy issuing dietary guidelines to address a global epidemic of non- communicable diseases, such as heart disease (Kumanyika). This is important because developing countries are having an increase in non-communicable diseases recently.

- A. Yes, there is plagiarism.**
B. No, there is not plagiarism.

B

Read the original source on the left and the student's writing on the right and decide if the student plagiarized or not.

Original Source

On the small islands, the main centers are accessible to most stayover tourists. These centers range in metropolitan population from about five thousand in Plymouth to almost one hundred thousand in Bridgetown and in Fort-de-France, Martinique. They possess a broad array of functions and facilities that is disproportionate to urban size. Nevertheless, the overall volume of activity and the physical space in which it occurs are constrained. The potential for tourist-local interaction is enhanced, and tourism assumes a high profile both physically and economically, even when the actual volume of the visitation is not high. The principal centers are always ports, which indicates the importance of cruise-ship activity as a factor in determining the geographical patterns.

Weaver, David B. "Model of Urban Tourism for Small Caribbean Islands." *Geographical Review* 83.2 (1993): 134-140. *JSTOR*. Web. 9 July 2015

Student's Writing

Tourism is one way that small islands can survive. David Weaver indicates that the number of ports in the Caribbean shows the importance of cruise ships in that area. He explains that these cruise ships make it possible for a large amount of tourism in the area (Weaver).

- A. Yes, there is plagiarism.
B. No, there is not plagiarism.

B	True or False? It's ok to borrow some ideas from an outside source as long as you don't copy the exact words in your own essay. A. True B. False
